

Impact the world naturally with Science!

Growing up on an Iowa farm, Amy Carolan developed an interest in the natural sciences at an early age. Later, a college professor lit within her a passion for ecology. Today, she's an ecologist who works to make the connection between man-made development and the protection of natural ecosystems.

Amy works with communities, government agencies, developers, and other landowners to assess, protect, and restore the natural resources on their property. She helps integrate human systems with natural ecosystems such as prairies, woodlands, and wetlands.

"I loved working with the land starting at a very young age," says the Decorah, Iowa native. "This is a great way to combine my passion and my science education to help protect the natural environment."
