

Ignite your imagination with Science!

For as long as he can remember, Albert Wiggins asked, "Why?"

When he couldn't figure out the answer quickly, he took the time to do the research to learn why things happened and how he could play a role in sparking that curiosity in others.

He planned to save the world, as a doctor, and then discovered his gift for teaching.

Today, Wiggins is leading a new generation of students as a science teacher and assistant principal at Bunger Middle School in Evansdale, Iowa.

He challenges his students to do more with new technology and new approaches and makes abstract concepts come to life. He helps them answer the question "Why?"
